

A woman with blonde hair, wearing a dark, wide-brimmed hat and a dark, long-sleeved dress with a gathered waist, is looking off to the side. The background is a textured, mottled blue and purple. A semi-transparent dark blue rectangle is overlaid on the image, containing the title text.

Build Custom Backgrounds for a Glamour Image in Photoshop

by Lee Varis

Build Custom Backgrounds

Sometimes we don't have access to interesting custom backgrounds to use for our photography subjects, but this should never stop you from creating an interesting backdrop in Photoshop. There are many illustration tools available in Photoshop that can be used to create interesting textures and colors, and these can form the basis for a background image that can be blended back into your original. I want to share with you the post process I went through with a recent workshop image and introduce a technique for creating custom backdrops in Photoshop using custom brushes.

The processes here are only outlined in a simple way, and I leave it up to you to experiment on your own to learn how to create your own original background artwork—the rewards, however, are greatest if you work out the specifics on your own... Some of the basic image enhancement techniques have already been covered in my "Portrait Retouching for the Artistically Challenged - part one" online course, and I invite you to review that course here:

[Portrait Retouching for the Artistically Challenged - part 1](#)

Stay with me to the end of this e-book for links to download custom brushes that can be used in Photoshop to create these custom backgrounds, including a bonus set of "hair" brushes!

Lets start with this base file right out of ACR/Lightroom...

Build Custom Backgrounds

Here is the original image capture with basic Lightroom enhancements

I did the usual Lightroom enhancements plus a little post crop vignetting and graduated filter application to darken edges and enhance the existing lighting vignette. Next up some Channel Mixer B+W with a 60-40 blend of red to green channels...

Build Custom Backgrounds

Here a fairly straightforward B+W conversion using the Channel Mixer in Photoshop

I was going for a 40's glamour look in the style of George Hurrell. I used a gridspot on a Norman flash as a key light from the upper right with another gridspot raking across her torso from the lower left... After some basic retouching to smooth out the skin, I added some more shape using the blue channel, masked into her face...

Build Custom Backgrounds

A little skin smoothing and an application of the blue channel darkness masked in to shadow the eyes lips and cheeks

Adding shading this way, using the blue channel B&W, is different than simply dodging and burning because there is more inherent local contrast in the blue channel, as well as darker skin. Very often, I will combine this with a little bit of dodging and burning using a softlight layer to sculpt the features more. Now its time to work up a custom background...

Build Custom Backgrounds

The background above was created on a layer, above a base layer of tone, by successive applications of different custom brush shapes.

Build Custom Backgrounds

I have a collection of custom brushes I've found, available for free on various websites (see resource links at the end) It is a lot of fun, and very fast, to build a custom background by overlapping various brush strokes and dabbing with brush shapes that create texture or splashes—some of my favorites are “blood splatters”—you can build them up in layers for more control, but I usually just start painting away freestyle until I have something that looks cool..

The Texture “layer” is applied in Overlay Blend mode to integrate with the underlying image.

Build Custom Backgrounds

Once the background layer is finished I change the layer blend mode from normal to "Overlay" – the texture then blends in with the underlying image. From this point it is only a matter of masking it off the figure by painting black with a soft edge brush in the layer mask for the texture layer...

Here the texture has been masked off the figure and opacity reduced to 63%

Build Custom Backgrounds

I usually reduce the opacity somewhat so that the texture doesn't overpower the figure. Next, a little subtle split tone effect...

I love applying a cool-warm split tone effect to enhance the tonal contrast with a little color contrast.

Build Custom Backgrounds

I use multiple Hue/Saturation layers to achieve a split tone effect and sometimes mask different "split-levels" to bring out subtle details – the folds of the dress are emphasized with a separate "split" than the rest of the image. You can see a detailed video step-by-step of this technique as part of my [Classic Hollywood Glamour post](#)... The final step is to work back some of the original color into the image...

Here the original color image is blended back into the split tone B&W in the face and hands.

Build Custom Backgrounds

I duplicated the background layer and brought it up to the top of the layer stack, set the blend mode to "Color," reduced the opacity and masked it off everything but the face and hands. The final result has a kind of hand colored look with a richly textured background. You never have to settle for a plain background again!

Here are a couple of other examples with the painted background layer and its final application in the image...

The result of different brushes overlapped with different apply modes...

Build Custom Backgrounds

The resulting image composite!

The beauty of this approach is that you can always have a unique background without having to rent a painted muslin backdrop, hang it or light it.

Build Custom Backgrounds

Another quickly painted background.

Build Custom Backgrounds

The final image with the painted background.

You can find custom brushes very easily with a simple Google search – [deviantART](#) is a great resource for custom brushes of all kinds- here are a few of my favorites:

Hair Brushes: [Nagel Series 12 Brushes](#)

[Nagel Series 36 Brushes](#)

[Download Nagel Hair Brushes](#)

Custom Brushes for Backdrops

Browse custom brushes on deviantART

[Grunge Brushes](#)

[Abstract Brush Set](#)

[Lightning Brushes](#)

[Cracks](#)

[Stone Brushes](#)

Brushes have to be installed and activated inside Photoshop to be made available for use! You can load them from the brush menu- they can be stored anywhere but usually you would place them in the Presets folder inside the application folder – here is a link to an article explaining how to do that: <http://www.obsidiandawn.com/installing-photoshop-brushes-gimp-tutorial> – & [Adobe's official directions](#)

I hope you found this e-book useful as an introduction to the techniques for creating custom backgrounds. Remember to check out my website from time to time because I am always adding new tutorials and videos that can expand your skills in photography and Photoshop!
